

title:GAS BOOKING SYSTEM

abstract:

The Gas Booking System is a web-based application designed to simplify LPG cylinder booking and delivery management. It allows customers to register, log in, and book gas cylinders online at their convenience. The system sends booking confirmations and delivery updates through email or SMS notifications. Admins can view and manage customer bookings, stock levels, and delivery schedules efficiently. The software reduces manual workload and eliminates the need for physical booking centers. It enhances transparency, accuracy, and customer satisfaction through automated record-keeping. The system is developed using technologies like HTML, CSS, JavaScript, PHP, and MySQL. Data is stored securely with backup and validation features to prevent errors and redundancy. Role-based access ensures smooth and secure user interactions. Overall, the Gas Booking System provides a reliable, fast, and user-friendly solution for online LPG management

Frontend Features

- User registration/login and profile management.
- Dashboard for booking LPG gas cylinders or registering new connections.

Backend Features

- API endpoints to handle user requests such as bookings, cancellations, and profile updates.
- Database to store user info, order details, connection requests, and delivery status.
